Significance of the Study

- When I studied abroad, I became interested in the motivational and expectation outcomes, parents have for their child or children as a university student.
- I'll investigate why and how parents are inspiring, influencing, and encouraging and motivating them to become successful.
- With surveys, I'll be investigating what family value expectation for Japanese and American parents have for their collegiate children which shapes their behavior and actions.
- Lastly, I'll carefully discover the financial aspects of how financial demands shape the university experience.

Research Questions

1. What are the expectations of parents, both American and Japanese, in how a university degree enhances the student's lives?
2. Are the motivations for higher learning purely economic or simply a life enhancement, or possibly a combination of both?
3. What is similar or different in the American and Japanese cultures that fuel these motivations for higher learning.
